The Machine Learning Reproducibility Checklist (Version 1.0)

For all **algorithms** presented, check if you include:

- □ A clear description of the algorithm.
- An analysis of the complexity (time, space, sample size) of the algorithm.
- A link to a downloadable source code, including all dependencies.

For any theoretical claim, check if you include:

- □ A statement of the result.
- A clear explanation of any assumptions.
- □ A complete proof of the claim.

For all **figures** and **tables** that present empirical results, check if you include:

- A complete description of the data collection process, including sample size.
- A link to downloadable version of the dataset or simulation environment.
- An explanation of how samples were allocated for training / validation / testing.
- □ An explanation of any data that were excluded.
- □ The range of hyper-parameters considered, method to select the best hyper-parameter configuration, and specification of all hyper-parameters used to generate results.
- □ The exact number of evaluation runs.
- A description of how experiments were run.
- A clear definition of the specific measure or statistics used to report results.
- Clearly defined error bars.
- A description of results with <u>central tendency</u> (e.g. mean) & <u>variation</u> (e.g. stddev).
- A description of the computing infrastructure used.
